SWAPUP ADMIN OPERATIONS | VISUAL STEP-BY-STEP GUIDE

How to Update the Parts Rate Card (Repair Price Book)

Routes: /admin/catalogue?tab=repair • /admin/settings • API: POST /api/admin/repair-book

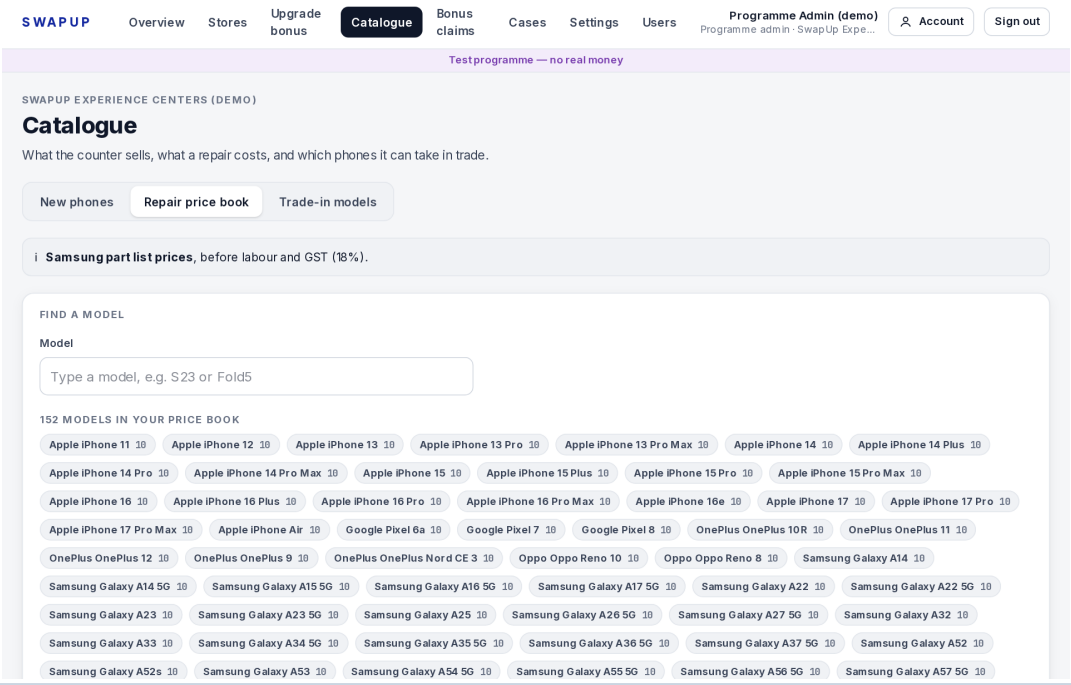

Step 1: Sign In as Retail Org Admin or Platform Admin

Open /login and sign in with an org_admin account (or platform admin account). Store advisors and managers cannot edit the org repair price book.

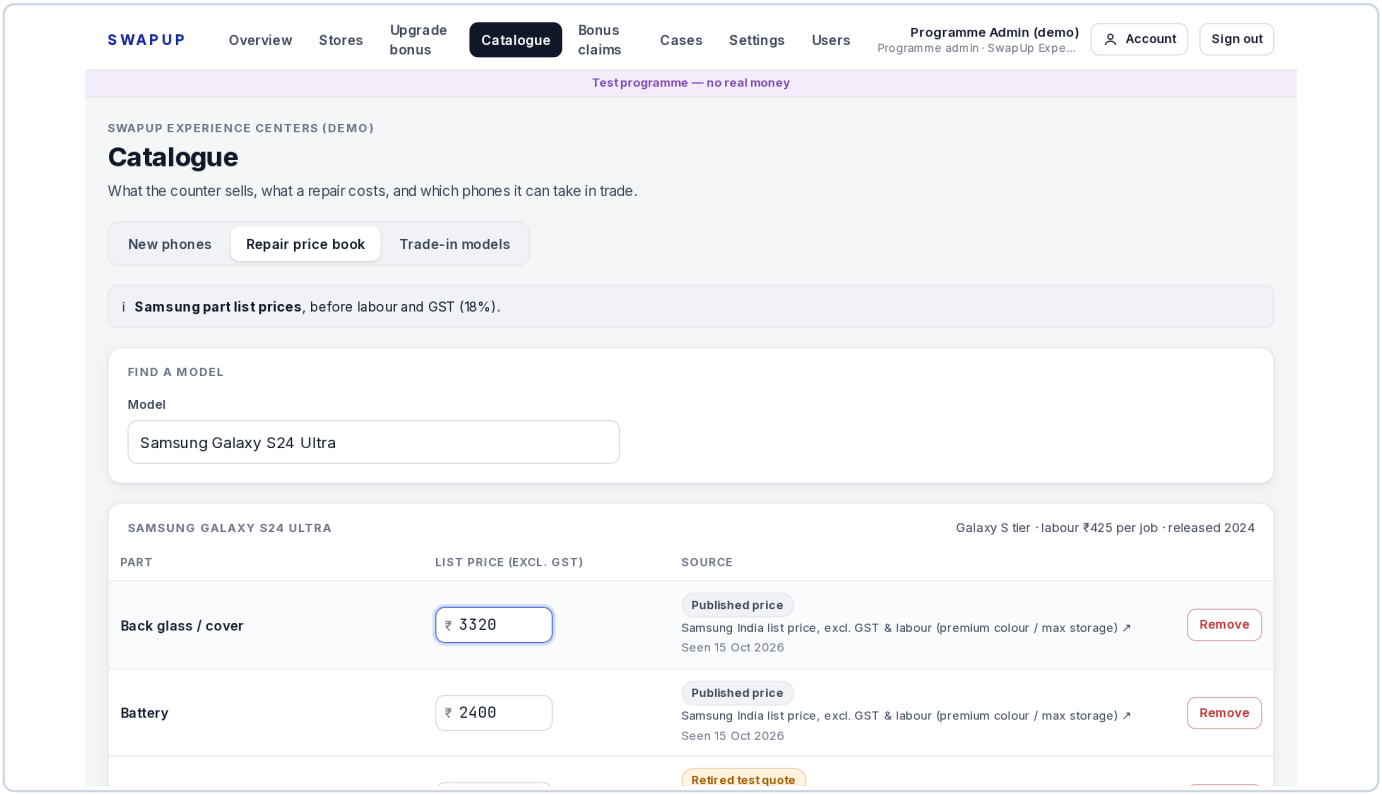

Step 2: Open Catalogue -> Repair Price Book & Pick a Model

Go to /admin/catalogue?tab=repair. Type a model name under 'Find a model', or click any model pill already in your price book.

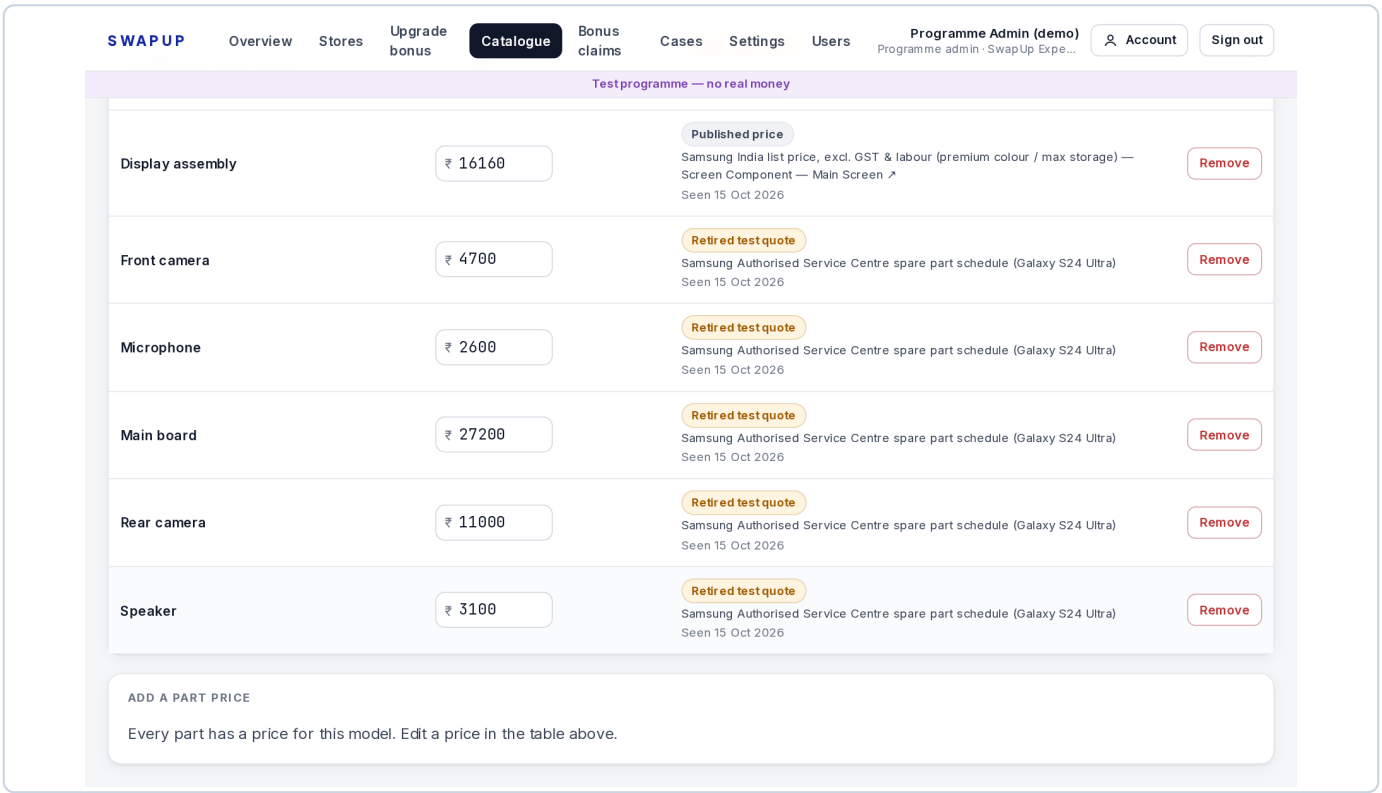

Step 3: Edit Existing Part Prices (List Price Excl. GST)

Update any part's whole-rupee price in 'List price (excl. GST)'. Save and Undo appear immediately—click Save (writes to POST /api/admin/repair-book) or Remove to delete the part price.

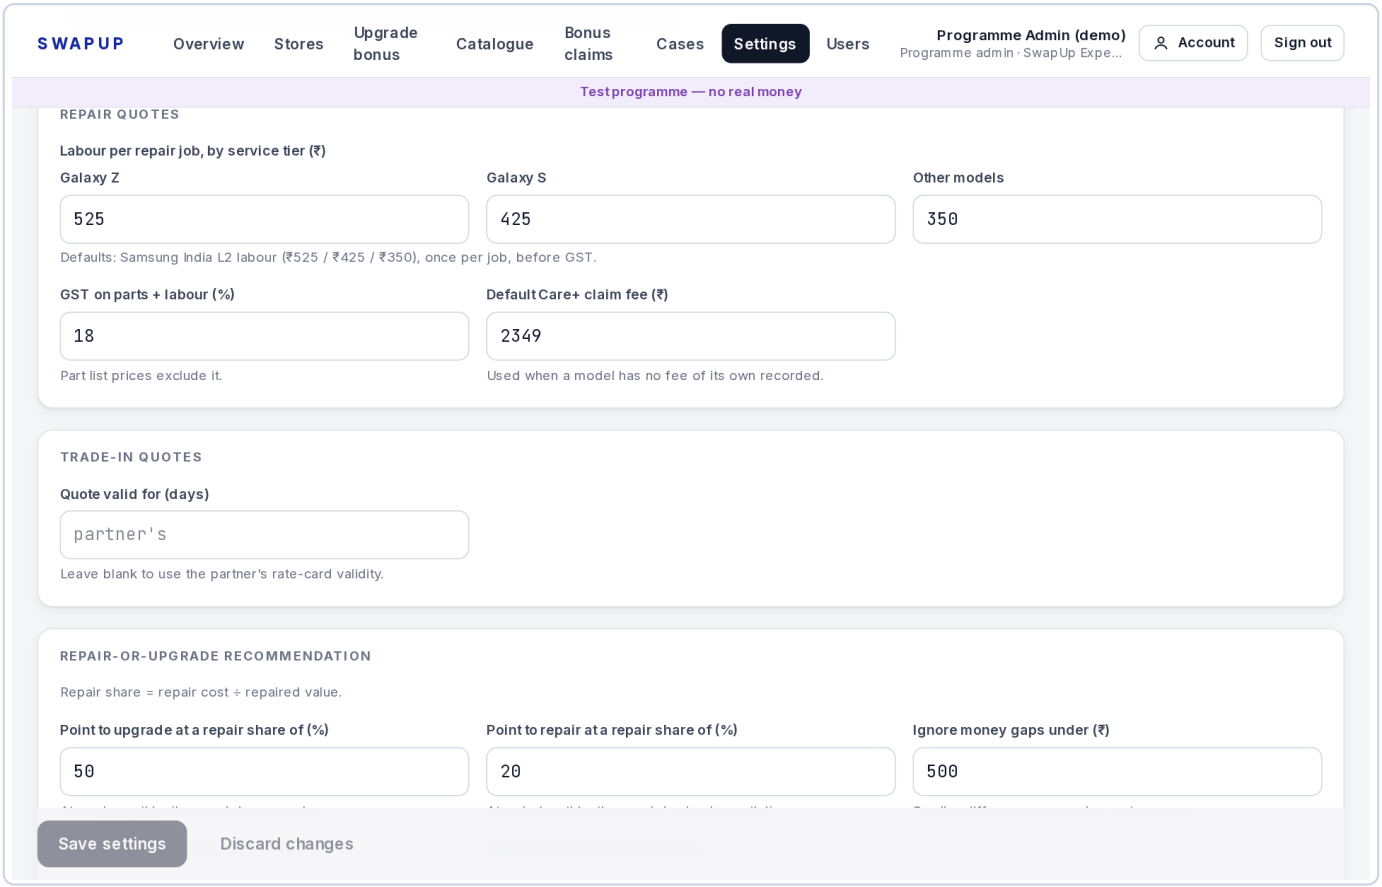

Step 4: Add Missing Part Prices for the Selected Model

Scroll to 'Add a part price' to add any of the 10 supported parts (display, battery, back_cover, charging_board, rear_camera, front_camera, speaker, mic, buttons, motherboard) with an optional source label.

Step 5: Update Service Labour, GST & Default Care+ Fee (/admin/settings)

At the counter, SwapUp adds tier labour + GST (default 18% / 1800 bp) on top of part list prices. Update labourByTier, GST %, and Care+ default fee in Settings (/admin/settings).

Bulk / Scripted Updates via API (POST /api/admin/repair-book)

There is no bulk CSV upload button on the Repair price book UI (a full reference matrix exists at /device-repair-costs.csv). To update multiple models programmatically while signed in as org_admin or platform, POST JSON per model + part:

```
{ "modelId": "galaxy-s24-ultra", "part": "display", "price": 16160, "sourceLabel": "OEM Nov 2026" }
// Send "price": null to remove a part price for that model.
```
